Demonstration 2 (Week 7)

Start Assignment

- Due 1 Nov by 23:59
- Points 7
- Submitting a file upload
- Attempts 0
- Allowed attempts 1
- Available 12 Oct at 0:00 - 8 Nov at 23:59

On-Campus demonstration of Exercises from Weeks 4 to 6 as chosen by your tutor.

Assessment Requirements

- **On-campus:**
  - Oral Q&A/Demonstration of Tasks in Class
    - be prepared to discuss and demonstrate
      - manipulation of SVGs
      - binding data to SVGs, reviewing DOM, writing data to console
      - loading data into D3 from csv files
      - construction of basic chart types (e.g., bars, scatter, line, pie, histogram)
      - scaling and axis construction
      - interactions (tooltip/filter)
- **Canvas submission**:
  - Links to GitHub classroom repositories (submit link as a comment) for:
    - Exercise 4.1 SVG house
    - Exercise 4.3 -4.6 Website with bar chart
    - Exercise 5 Multi-chart page
    - Exercise 6 Interactivity
  - Link to website (hosted on Mercury) for **each** exercise listed:
    - Exercise 4.1 SVG house
    - Exercise 4.3 -4.6 Website with bar chart
    - Exercise 5 Multi-chart page (all exercises on one page)
    - Exercise 6 Interactivity (all exercises on one page)

      One website with a page or each ok, with appropriate navigation

  - GenAI declarations for Exercise 4-6 (document submission - must be separate upload, not just in readme.md)

Special requirement: **Questions only asked about work submitted** (i.e., general knowledge about a topic without submitted example will not be assessed).

Extensions and Late Penalties:

See: **Extensions and Late Penalty Policy (https://swinburne.instructure.com/courses/78028/pages/extensions-and-late-penalty-policy)**

Academic Integrity

See: **Academic Integrity (https://swinburne.instructure.com/courses/78028/pages/academic-integrity)**

Make sure you are fully prepared to discuss any work that you submit!

IMPORTANT: Excessive commenting of code, or heavy reliance on comments (i.e., reading comments rather than describing personal experience) during a demonstration, will be deemed to be 'use of GenAI'.

Rubrics

See below for rubrics that explain how this assessment will be marked. GenAI was used to assist with writing of these rubrics.

Demo 2 (2)

Criteria	Ratings				
Interview	**Very Good** You can clearly describe the code submitted, its purpose and how it fits together. You can explain why specific approaches were used and how they work. You demonstrate good understanding of web, svg and D3 programming concepts. You can answer follow-up questions and describe changes to your code to achieve specified modifications. Includes non-trivial extra features, visualisation elements or concepts not directly covered in the tutorial instructions.	**Good** You demonstrate general understanding of your code and how it works, but have small gaps when questioned deeply. Your explanations are mostly correct but may lack clarity or confidence. You need some prompting to explain decisions or concepts. All class exercises are fully implemented. If you included data visualisations or visualisation features the justification or explanation of your approach is not clear.	**Satisfactory** You can describe what your code does, but struggle to explain how it works. You show limited understanding of key programming concepts used in your code. You have difficulty answering questions about how to modify your code to achieve specified modifications. Includes most of the class exercises, may have some parts not implemented completely.	**Boarderline** You can identify major features of your code but you cannot properly explain your submitted code. You show minimal understanding of basic concepts of web, svg or D3 programming. You may appear to rely heavily on GenAI, or guess answers.	**Unsatisfactory** You show no or limited understanding of the code submitted. You cannot explain how key parts of the code works or how it produces the desired output. Or you did not attend the interview.
